What is World Youth Skills Day?

Every year on 15 July, we celebrate World Youth Skills Day. It started in 2014 to show how important it is for young people to learn skills that help them get good jobs and even start their own businesses.

In 2025, we are celebrating the 10th anniversary of this special day. This year's theme is all about giving young people the skills they need to use computers and Artificial Intelligence (AI).

AI is changing the world – from the way we work to how we learn. It's important that young people learn how to use these new tools in a fair and smart way.

World Youth Skills Day is a chance to support and inspire young people to become leaders who can help make the world a better, kinder, and more equal place.

Top 5 Skills for Future Careers

These are the top 5 skills businesses believe are essential to be successful in the workplace.

AI and Big Data

Resilience

Analytical Thinking

Creative Thinking

Leadership

AI and Big Data

AI (Artificial Intelligence) and Big Data help computers learn and understand lots of information. They are used in many jobs like healthcare, technology, and protecting the planet. AI is also used in robotics to support humans in their day to day roles.

As the world becomes more digital, these skills will be needed even more. Learning them now helps young people get ready for exciting careers.

Creative Hut

Resilience

Resilience means being able to bounce back from setbacks and keep going, even when things are tough. In school, it helps you stay focused, try again after mistakes, and keep learning even when something feels challenging.

These same skills are important in the workplace, where people often face deadlines, problems to solve, or changes they didn't expect. Being resilient helps you stay positive, manage stress, and keep working towards your goals. By building resilience now, you're preparing to succeed both in school and in your future career.

Creative Hut

Analytical Thinking

These skills are just as important in the workplace, where people need to make good decisions, understand information, and solve real-world problems. Jobs in science, business, and technology all rely on strong analytical thinking. By practising these skills now, you're training your brain to think clearly and creatively in the future.

As the world becomes more digital, these skills will be needed even more. Learning them now helps young people get ready for exciting careers.

Creative Hut

Creative Thinking

Creative thinking means using your imagination to come up with new ideas or solve problems in different ways. In school, it helps you write interesting stories, design unique projects, or find clever solutions in Science and Mathematics.

Creative thinking is also important in many jobs, like art, technology, business, and engineering, where fresh ideas are needed to invent, improve, or solve challenges. It helps people think outside the box and see things from different angles.

Creative Hut

Leadership

These same skills are important in the workplace, where leaders need to make decisions, solve problems, and encourage their team. Leadership isn't just about being in charge — it's about being responsible, fair, and helping everyone do their best.

Leadership means guiding and supporting others to work towards a goal. In school, good leaders help their classmates, listen to different ideas, and set a positive example during group work or activities.

Question 2

How can Artificial Intelligence (AI) support the way we live and work in the future?

By replacing all humans in every job

A

By learning from data to help make faster, smarter decisions

B

By doing only one task again and again

C

By controlling what people think

D

Creative Hut

Question 3

Why is Big Data becoming so valuable in the modern world?

A It helps us ignore small details

B It confuses people into making decisions

C It gives companies ways to sell more products

D It allows us to understand large amounts of information and spot useful patterns

Question 5

How can creative thinking help us tackle real-world challenges?

By sticking to old ideas that always work

A

By helping us imagine new possibilities and explore different solutions

B

By making things more complicated

C

By guessing instead of planning

D

Creative Hut

Question 6

You're solving a tricky problem. What does analytical thinking help you do?

A
React quickly without thinking

B
Look at the problem step by step, find patterns, and decide on a smart solution

C
Ask someone else to do it

D
Make a random guess

Creative Hut

Question 7

In the future, how might resilience help someone dealing with fast-changing technology at work?

A
It allows them to ignore changes

B
It helps them adapt, stay calm, and continue learning new skills

C
It stops them from needing help

D
It means they never have to try again
